STEAM WEED CONTROL

Steam Spike Set Product Specifications

Localised delivery with deep penetration gives you the most effective hydro thermal kill available

The Steam Spike Set is a versatile set of applicator heads designed to deeply penetrate weeds and inject steam into them for an all-round effective kill.

The set comes with several different configurations, so you can tackle everything from Broadleaf Weeds, Tufted Root Grass, and even Banana Suckers.

Localised delivery allows you to specifically target those hard to kill weeds while leaving other plants undisturbed.

Gotta job for this one? [0477 786 847](tel:0477786847)

- ✔ Simple quick-couple attachment
- ✔ Versatile range of applications
- ✔ Localised delivery for targeted weed control
- ✔ Deep penetration to target root zones
- ✔ Organically kill Banana Suckers
- ✔ Stop Broadleaf Weeds & Tufted Root Grass

The Steam Spike Set Configurations

There are 3 main configurations that come in the Steam Spike Set:

1. Tufted Grass Root Spike; for boring superheated water into the fibrous rootzone or deep roots of large broad leaf weeds.

2. Banana Sucker Spike; for efficiently killing Banana suckers. Previously, there were no truly organic methods of achieving this.

3. Broadleaf Weed Spike; sprays the crown and penetrates the tap root of smaller Broadleaf weeds such as nutgrass, onion weed etc – usually very difficult to kill.

After 2 years of development the Steam Spike Set was born. It was specifically created to penetrate deeply to kill the roots of the weeds,

Another application that was kept in mind during the design of the Steam Spike Set was managing Banana Sucklings. Conventional methods have turned to injecting chemicals and hormones directly into the sucker. Organic methods are laborious & slow. The Banana Spike is a whole new ball-game, with efficiency and organics in mind.
